

Noetix® Generator for Business Objects®

Noetix Generator for Business Objects delivers automated, cost-effective access to Oracle E-Business Suite and PeopleSoft Enterprise application data, making it faster and easier to roll out end user reporting to Business Objects users.

Noetix Generator for Business Objects automatically populates BusinessObjects universes with NoetixViews® for Oracle E-Business Suite and/or NoetixViews® for PeopleSoft Enterprise, and then automatically exports the generated universes into the Business Objects Central Management Server. As a result, report authors and query users can immediately begin using their Business Objects reporting tool of choice to develop their reports and queries against configuration-specific views of their Oracle application data.

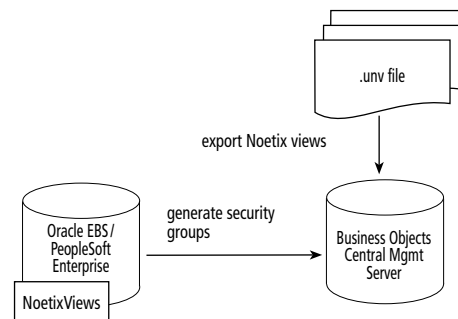

Automatically Generates NoetixViews into BusinessObjects Universes

Noetix Generator automates two key steps for Business Objects administrators. In the first step, it creates a class for each Noetix view in the universe (.unv) files. These .unv files can then be viewed and managed in the BusinessObjects Universe Designer.

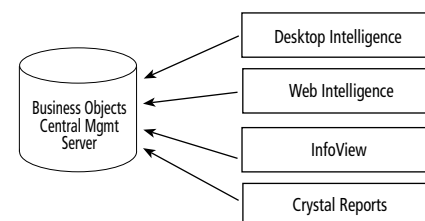

Automatically Exports Universes into Central Management Server

In the second generation step, Noetix Generator exports the universes into the BusinessObjects Central Management Server. In addition, security groups are generated based on NoetixViews roles.

Business Objects users can now access Noetix views using Web Intelligence, Desktop Intelligence, InfoView or Crystal Reports. In the final generation step, Noetix Generator creates a library of pre-built reports in Web Intelligence.

Key Features for Business Objects Administrators

Automatic Creation of BusinessObjects Classes and Objects

Within minutes, administrators can automatically populate a universe in the BusinessObjects Universe Designer with the latest NoetixViews content. A Business Objects class (and its objects) is created for each Noetix view (and its columns).

Automatic Population of BusinessObjects Central Management Server

Administrators can automatically publish Noetix-generated classes into the BusinessObjects Central Management Server. Alternatively, administrators can use BusinessObjects Universe Designer to export these universes.

Automatic Creation of BusinessObjects Security Groups

By grouping Business Objects classes by NoetixViews roles security setup is greatly simplified. Administrators can easily grant these roles to Business Objects users, giving them access to only the views they are authorized to use.

Automatic Creation of Pre-Built Reports

As an add-on to NoetixViews, Noetix Generator also generates NoetixAnswers, pre-built reports designed to answer hundreds of the most common business questions "out-of-the-box."

Key Features for Business Objects Users

Descriptive NoetixViews Content

Noetix Generator populates descriptive content, normally found within the NoetixViews Help File, providing users with the familiar language they know and immediately understand.

Intuitive Organization of BusinessObjects

Based on the familiar organization found within the NoetixViews Help File, report authors can easily navigate Business Objects classes, objects, and hierarchies.

Pre-defined Joins and View Relationships

Noetix Generator automatically defines the joins between related NoetixViews, providing users with a greater breadth and depth of information retrieval.

Hundred of Answers "Out-of-the-Box"

With NoetixAnswers, users can begin answering their business questions immediately by leveraging the pre-built report templates available to them in Web Intelligence.

Two Offerings Available

Noetix Generator for Business Objects is available as two separate offerings: Enterprise and Standard. The Enterprise product is for enterprise customers using BusinessObjects XI. The Standard product is bundled in with Business Objects QuickStart Pack, Noetix QuickStart for Oracle E-Business Suite, and is targeted for Edge Series (formerly Crystal Decisions) customers.
